### **Royal Group Announces the Addition of ENT Fittings to Product Line**

**March 31, 2011** (Woodbridge, ON) – Royal Group is pleased to introduce an innovative new line of electrical nonmetallic tubing (ENT) fittings for slab construction. The new fittings complement Royal's existing family of non-corroding, non-conductive ENT products.

Royal's ENT fittings provide a unique benefit to the market place by offering a deep-socket fitting and removable clip ring making it the easiest ENT system to install. The new product line includes an innovative threepipe corrugation deep-socket fitting and removable/replaceable four-tab exterior clip ring.

The new Royal ENT fittings, when combined with Royal's corrugated ENT pipe, give electrical contractors a concrete-tight system and a cost-effective alternative to heavy metallic tubing. It is easy to handle and install allowing contractors to curve pipe around the slab and install fittings without the need for tools. Fittings are durable, impact resistant and will not pull out under heavy construction activity. In addition, the unique clip design allows pipe to be disconnected and reconnected easily.

Products are suitable for use in commercial, residential and institutional construction (lowrise and highrise).

"Royal Group is committed to developing new, innovative products to meet the needs of our customers," says Paul Czachor, vice president and general manager, Royal Pipe Systems "The development of Royal ENT Fittings is the latest example of that commitment to the North American construction industry."

Royal ENT fittings and boxes offer a number of additional benefits to contractors including:

- Lifetime guarantee against corrosion and conducting
- Slab boxes with angled holes and traditional tabs allowing for nails or screws
- Elevated slab box connector hubs permitting larger diameter rebar
- Slab box design that offers the largest volume for wires in the industry (51 cubic inches)
- Ident-A-Box® slab boxes are available with color-coded lids for easy wire identification
- Expanded range of ENT to EMT adapters from 1/2" up to 2"

- Quick-snap adaptors modified from two to four locking tabs to increase connection strength
- Flexible, light, easy to curve, durable and crush resistant pipe
- Product is rot free, bug resistant and 100% recyclable
- All pipe and fittings are certified to CSA and UL and meet all applicable building code standards
