**IMPORTANT: FIRE SAFETY INFORMATION**
When rigid vinyl siding is exposed to significant heat or flame, the vinyl will soften, sag, melt or burn, and may thereby expose material underneath. Care must be exercised when selecting underlayment materials because many underlayment materials are made from organic materials that are combustible. You should ascertain the fire properties of underlayment materials prior to installation. All building materials should be installed in accordance with local, state and federal building code and fire regulations.

Notes
Certified vinyl siding is siding that is verified by an independent process to meet or exceed ASTM D3679, the long-standing, accepted industry standard for quality vinyl siding. ASTM, the American Society for Testing and Materials, is one of the largest standards development systems in the world and has been developing technical standards for products for the past 100 years.

Many vinyl siding manufacturers have been working to meet or exceed the ASTM standard for years, but now through the VSI certification program, they can demonstrate to consumers that their products have achieved this mark of quality.

*Consult the VSI website at www.vinylsiding.org for a list of certified products and colors.*
