ZURI CELLULAR PVC DECKING

CSI Section: 06 53 00 Plastic Decking

1.0 RECOGNITION

Zuri Cellular PVC Decking was evaluated for use as deck boards for exterior balconies, porches, decks and stair treads. Zuri decking was also evaluated for use as cladding materials for walls as part of the weather-resistant exterior wall envelope. The physical, structural, durability, wind-load resistance, installation, and surface burning characteristics of the decking material, used as decking or as cladding, are satisfactory alternatives to those prescribed in the following codes:

- 2017 Florida Building Code, FBC Building and FBC Residential –Attached supplement

2.0 LIMITATIONS

Use of Zuri Cellular PVC Decking recognized in this report is subject to the following limitations:

2.1 Zuri Cellular PVC Decking shall be installed in accordance with the applicable code, the manufacturer’s published installation instructions, and this report. Where there is a conflict, the most restrictive requirements shall govern.

2.2 Use of the decking in a fire-resistance-rated assembly is outside the scope of this report.

2.3 The compatibility of the fasteners, metal post mount components, and other hardware with the supporting construction, including chemically treated wood, is outside the scope of this report and subject to approval by the code official.

2.4 The deck boards shall be directly fastened to supporting construction. Where required by the code official, engineering calculations and construction documents consistent with this report shall be submitted for approval. The calculations shall verify that the supporting construction complies with the applicable building code requirements and is adequate to resist the loads imparted upon it from the products and systems described in this report. The documents shall contain details of the attachment to the supporting structure consistent with the requirements of this report. The documents shall be prepared by a registered design professional where required by the statutes of the jurisdiction in which the project is to be constructed.

2.5 Adjustment factors outlined in the AWC National Design Standard (NDS) and applicable codes do not apply to the allowable capacity and maximum spans for the Zuri Cellular PVC Decking.

2.6 The deck boards do not contain wood or other cellulosic materials and are considered equivalent to preservative-treated or naturally durable wood for termite resistance.

2.7 Zuri decking, when used as cladding, shall be installed over minimum 2x furring in accordance with Section 3.2.2 of this report, attached to walls capable of resisting the design wind pressures.

2.8 Flashing and water-resistive barriers shall be installed as required by the applicable code.

2.9 Zuri Cellular PVC Decking is produced in Marion, Virginia.

3.0 PRODUCT USE

3.1 Use as Decking: Zuri Cellular PVC Decking is for exterior use as deck boards for balconies, porches, decks, stair treads and similar appendages of buildings of Type V-B Construction (IBC) and other types of construction in applications where untreated wood is permitted by IBC Section 1406.3, and buildings constructed in accordance with the IRC.

3.1.1 Design:

3.1.1.1 Structural capacity: The Zuri deck boards have an allowable capacity of 225 psf (10.8 kN/m²) when installed at a maximum center-to-center spacing of the supporting construction of 16 inches (406 mm). The Zuri deck boards have a span rating of 100/16.

3.1.1.2 Deck boards used as stair treads: Zuri deck boards used as stair treads resist the code-prescribed concentrated load of 300 lbf (1.33 kN) when installed at a perpendicular, center-to-center, maximum spacing of the supporting construction of 12 inches (305 mm). The deck board stair treads shall be installed in a minimum two-span condition.

3.1.2 Installation: Installation of Zuri Cellular PVC Decking shall comply with this report and the
When subjected to weathering, the Zuri Cellular PVC Decking is equivalent in durability to preservative-treated or naturally durable lumber. The Zuri Cellular PVC Decking does not contain cellulosic fillers. The deck boards have been evaluated for structural capacity when exposed to temperatures between -20°F (-29°C) and 125°F (52°C).

The surface burning characteristics of Zuri deck boards were tested in accordance with Section 4.9.1, the Fire Propagation Test Method, in ASTM D7032-10a and comply with the surface burning acceptance criteria therein.

5.0 IDENTIFICATION

The Zuri Cellular PVC Decking described in this report is identified by a label, on each individual piece or on the packaging, bearing the Royal Building Products name, the Zuri name, see ER-367 for use and performance levels, the IAPMO Uniform ES Mark of Conformity and the Evaluation Report Number (ER-367). The identification includes the IAPMO Uniform Evaluation Service Mark of Conformity. Either Mark of Conformity may be used as shown below:

![UES Mark](image)

6.0 SUBSTANTIATING DATA

6.1 Data was submitted in accordance with applicable portions of the ICC-ES Acceptance Criteria for Deck Board Span Ratings and Guardrail Systems (Guards and Handrails) (AC174), dated January 2012, editorially revised December 2014.

6.2 Deck Fire Propagation testing in accordance with ASTM D7032-10a. Appendix A2.

6.3 Wind load resistance testing in accordance with ASTM D5206, as referenced in ASTM D3679.

6.4 Rate and extent of burning testing in accordance with ASTM D635.

4.0 PRODUCT DESCRIPTION

Zuri Cellular PVC Decking is a co-extruded cellular PVC deck board with a photorealistic wood grain pattern and an acrylic capstock layer. The deck boards are manufactured of nominally 1-inch-thick (25.4 mm) by 5 ½-inch-wide (140 mm) profiles. The Zuri deck boards are available in lengths of 12, 16 and 20 feet (3.66, 4.88, and 6.1 m, respectively) and in five woodgrain patterns: Chestnut, Brazilia, Walnut, Pecan, and Weathered Gray.

Zuri deck boards are available with a square edge profile and with a grooved edge profile (See Figures 1 and 2). The Zuri deck boards produced with the grooved edge profile are extruded to include a 5/16-inch-deep (7.9 mm), 90° groove running the entire length of the board.
7.0 STATEMENT OF RECOGNITION

This evaluation report describes the results of research carried out by IAPMO Uniform Evaluation Service on Royal Building Product’s Zuri Cellular PVC Decking to assess conformance to the codes shown in Section 1.0 of this report and serves as documentation of the product certification. The Decking is manufactured at locations noted in Section 2.9 of this report under a quality control program with periodic inspection under the surveillance of IAPMO UES.

1.0 RECOGNITION

Zuri Cellular PVC Decking described in IAPMO UES Evaluation Report ER-367 are satisfactory alternatives to the decking and cladding systems prescribed in the following codes:

- 2017 Florida Building Code, Building (FBC, Building)
- 2017 Florida Building Code, Residential (FBC, Residential)

2.0 LIMITATIONS

Installation shall be in accordance with ER-367, the manufacturer’s published installation instructions. Installation as cladding shall also comply with Section 1405 of the FBC, Building or Section R703 of the FBC, Residential, as applicable. Flashing shall comply with Section 1405.4 of the FBC, Building.

For buildings built in accordance with the FBC, Residential, design wind loads for cladding shall be determined in accordance with Tables R301.2(2) and R301.2(3), as required by Section R301.2.1 of the FBC, Residential; when required, conversion between $V_{ult}$ (Ultimate Design Wind Speed) and $V_{asd}$ (Nominal Design Wind Speed) shall be in accordance with R301.2.1.3 of the FBC, Residential. For buildings built in accordance with the FBC, Building, design wind loads for cladding shall be determined in accordance with Section 1609.1.1 of the FBC, Building; when required, conversion between $V_{ult}$ and $V_{asd}$ shall be in accordance with 1609.3.1 of the FBC, Building. Design pressures determined in accordance with the FBC shall not exceed 150 psf (7.2 kPa).

Wind load testing was performed in accordance with ASTM D5206, as referenced in ASTM D3679.

Use of the Royal Building Products Zuri Cellular PVC Decking for compliance with the high-velocity hurricane zone (HVHZ) provisions of the FBC, Building and FBC, Residential has not been evaluated and is outside the scope of this evaluation report.
